Arcler Education

Arcler Education is a leading independent global publisher of Academic, Professional, Research works and Textbooks and is dedicated to publishing collections of titles under its imprints (Arcler Press, Delve Publishing and Society Publishing) in various subjects areas such as Agriculture and Life Sciences, Animal and Veterinary Science, Engineering, Computer Science, Science and Mathematics, Business and Management, Law, Library Science, Education and Psychology, Hotel and Tourism and Humanities. We offer scholarly content for students and academic researchers with a commitment to publishing innovative and informative books written and edited by internationally renowned professionals in their fields.

CONTENTS

Agriculture and Plant Science	1	Hospitality and Tourism	50
Animal and Veterinary Science	8	Journalism and Mass Communication	55
Aquaculture and Fisheries	9	Language and Linguistics	56

Water Harvesting for Agriculture

Hazem Shawky Fouda, Alexandria University, Egypt

Water harvesting was considered as an important aspect in the agriculture. This book explains the role of water in increasing the crop yields and its importance in associated industries. The importance of domestic rain water harvesting was explained with examples. The effect of surface runoff on the crops and farming methods was described in detail. The loss of important soil nutrients due to runoff was described. The design of the water harvesting systems was illustrated. The components needed in the water harvesting system was emphasized. Different types of water harvesting systems was explained in this book. The importance of water harvesting techniques in the developing countries was discussed in detail. The rainfed agriculture system was emphasized in this book. The role of ecosystem services in maintaining water harvesting systems was explained.

Food Production and Agriculture

Patrícia Alexandra Batista Branco, Higher Institute of Agronomy, Lisbon, Portugal

Food Production And Agriculture provides the readers with the basic information on the processes of food production and the role of agriculture in it. It also talks about the factors that affect the agricultural food production and the relationship between the economic growth and food production. It provides the readers with deep insights into the various aspects related to the agriculture and the food production related to it for a deep understanding of the subject. This book also discusses about the animals used in agriculture and their production, the food crops that are generally used in agriculture and their production, the role played by water in irrigation and the nitrogen fertilizers in agricultural food production, the various effects of environmental factors and the role and significance of women in agriculture.

Veterinary Entomology

Patricia Marques, University of Maryland Baltimore, USA

Veterinary Entomology is the scientific study of arthropods, a branch of zoology, related with Veterinary diseases. In this book starts by the study of Ectoparasites, which include fleas, lice, ticks and other insects and arthropods. Ectoparasites are a taxonomically diverse group of organisms that infest the skin of human beings and other animals. This ectoparasites can infect several animal hosts, including dogs, cats, birds and bats. These arthropods can also be vectors of disease, transmitting bacteria, parasites and viruses. The most important arthropods in Veterinary entomology are mosquitoes, ticks and flies, since they can act as ectoparasites and/or vectors of disease. Thousands of mosquito species feed on the blood of various hosts—vertebrates, including mammals, birds, reptiles, amphibians, and some fish; along with some invertebrates, primarily other arthropods. This loss of blood is seldom of any importance to the host. The mosquito's saliva is transferred to the host during the bite, and can cause an itchy rash. In addition, many species can ingest pathogens while biting, and transmit them to future hosts. In this way, mosquitoes are important vectors of diseases such as malaria, yellow fever, Chikungunya, West Nile, dengue fever, filariasis, Zika and other arboviruses. Ticks also need to ingest blood to complete their life cycle. Ticks are vectors of many diseases that affect humans and other animals. Houseflies, commensal with humans all over the world, spread food-borne illnesses. Flies can be annoyances especially in some parts of the world where they can occur in large numbers, buzzing and settling on the skin or eyes to bite or seek fluids. Larger flies such as tsetse flies and screwworms cause significant economic harm to cattle. Blowfly larvae, known as gentles, and other dipteran larvae, known more generally as maggots, are used as fishing bait and as food for carnivorous animals. They are also used in medicine in debridement to clean wounds. In conclusion, this book will cover several aspects of Veterinary Entomology.

Aquaculture and Fisheries

Fisheries Resource Conservation

Bruno Augusto Amato Borges, Federal University of Santa Catarina, Brazil

The book 'Fisheries Resource Conservation' discusses contemporary issues affecting global fish populations. This book describes insufficient conservation measures, jurisdictional disputes and illegal fishing vessels as some of the issues that threaten fish stocks. It stresses that there's an urgent need to adopt sustainable fishing practices, since communities that depend on fishery resources risk having their livelihoods stopped when fish populations are threatened. This book mentions the impact of globalization on local fish stocks, where the influx of external fishing boats into coastal waters has severely affected some countries' ability to fulfill domestic demand for the commodity. People must understand the importance of preserving fish populations if it's to be used as a long-term food resource.

Application of Biotechnology in Pulp and Paper Processing

Preethi Kartan, University of Leeds, UK

Application of biotechnology in pulp and paper processing describes the techniques like enzymes engineering, molecular biology, proteomics, genetic engineering genomics along with metabolomics and bioinformatics. These biotechniques in 21st century have helped in development of pulp and paper sector in terms of economic feasibility and designing. As described, biotechnology is known for increasing cost efficiency, product quality and developing environment friendly processes. Further, readers have been provided with some extended topics like Biodegradation of Endocrine-Disrupting chemicals and residual organic pollutants of pulp and paper mill effluent by bio-stimulation.

Information Systems for Business

Isaack Onyango Okwaro, De-Montfort University, UK

Information Systems for Business gives the readers an introduction to information systems and talks about the transition from manual to IT-based business processes. It elaborates on the management information systems and the database management. Also discussed in the book are the advantages and the impact of information system on business, the use of information system in the supply chain management and the use of such system in the marketing processes. The book also gives insights on the future trends in information systems for the readers to know the importance of it.

Data Science for Business and Decision Making: An Introductory Text for Students and Practitioners

Seyed Ali Fallahchay, Raffles and Design Institute, Jakarta, Indonesia; University of Rio de Janeiro, Brazil

This book explores the principles underpinning data science. It considers the how and why of modern data science. The book goes further than existing books by applying data to decision making. Not only is the book useful for undergraduates, but it can also help business owners in improving their decision making. Using real life examples, this book explores the possibilities and limitations of an information-based decision making framework.

Basic Organic Chemistry

Ramesh Chandra, University of Delhi, India; Snigdha Singh, University of Delhi, India and and Aarushi Singh, University of Delhi, India

Basic Organic Chemistry discusses the basic concept of chemistry as well as organic chemistry. It includes detailed description of organic molecules, functional groups and the nomenclature of the organic molecules. This book also discusses the notion of acids and bases and stereochemistry of the organic molecules along with the description of amino acids, proteins, carbohydrates, alcohol and ethers. It provides the reader with the insights of basic organic chemistry so as to understand the basic organic reactions and the application of spectroscopy to study organic molecules.

Seismology, Earthquake Engineering and Structural Engineering

Tanjina Nur, University of Technology Sydney, Australia

Seismology, earthquake engineering and structural engineering examines various dimensions of seismology, and earthquake engineering. It includes the meaning of seismology, a description about earthquake and various structural engineering tools and applications required to deal with earthquake. This book provides the reader with the insights into the development of various structural engineering products to get rid of after-effects of earthquakes and help people overcome the vulnerable effect of it.

Principles of Big Data

Alvin Albuero De Luna, Premier University, Laguna, Philippines

Data has assumed prime importance in the current world and it is evident in the manner in which it is an aspect that is kept in mind while making some key decisions in political as well as business domains. Big data refers to the large volumes of data that is synthesized and analyzed to reach at the decision-making conclusions. The book 'Principles of Big Data' takes the readers through the various aspects of big data and informs about the various important principles that it works on. Through the book the readers get a deeper insight on the big data and its application in the analytical world.

Ivan Stanimirović, Faculty of Sciences and Mathematics at University of Niš, Serbia

Parallel Programming talks about a type of computation “parallel programming” and the parallel algorithm designed by technique “PCAM”. It includes the description of parallel computer systems and parallelization of web compatibility tests in software development. It provides the reader with the understanding of parallel programming so as to analyze the differences in modular programming, recursive programming and dynamic programming and precise knowledge related to Turing’s Hypothesis. This book also discusses about Theoretical Framework of parallel programming, Modular Programming, Recursive Programming and Dynamic Programming and Turing’s Hypothesis

Population Geography

Rodolfo B. Valdenarro, Centro Escolar University, Manila, Philippines

The book 'population geography' examines how population distribution, organization, characteristics, and growth are correlated with the nature of a particular location. This book covers several topics, such as; population patterns across seven continents, factor that influence population distribution trends, and the relationship/connection between populations of a given area its environmental conditions. Models discussed in population geography include population size, distribution, composition, growth and density. Others are immigration, mortality, race, fertility and aging, just to mention a few. Readers will understand better the society around them, demographic structures, and how populations can be managed through controlled movements. This book also discusses the roles of men and women in social development.

Renewable Resources and Global Challenges

Mohit Chhabra, University of Colorado Boulder, USA

Renewable Resources and Global Challenges brings to focus of the readers the various challenges that are being faced by the resources of energy and other important things in the current world and how even the use of renewable resources is experiencing some difficulties. It gives a deep insight to the readers on the various aspects related to renewable energy resources and how they can be used to produce energy in the future. This book also discusses about the meaning of renewable resources, the various biotic and abiotic resources, the sources instrumental in renewable energy, generation of electricity from renewable energy resources, the issues related to non-renewable energy resources and the technical innovations in renewable resources sector.

Encyclopedia of Environmental Science Vol 6: Social Aspects of Water Management

Shalinee Naidoo, The University of KwaZulu-Natal, South Africa

Implementing policies and programs that modify how people can access, use or interact with water resources is frequently socially antagonistic. This book recognizes key principles for evaluating and dealing the social effects of water reform. The significance of social acceptability to successful water reform is examined, together with the role of social assessment in attaining this. Water resources and services are parts of social systems that encompass beyond the technical world and the integrated water resources management needs a balance between competing views of social and political issues.

Education and Psychology

Research and Evaluation in Education and Psychology

Aparna Raghvan, University of Madras, India

The book 'Research and Evaluation in Education and Psychology' takes the readers through the various aspects related to conducting research in the field of psychology and applying the knowledge gained from it in the field of education. It also outlines the importance of evaluation in the field of education and brings to notice of the readers, the manner in which psychology can be effectively used in evaluation. The book also talks about the prospects of using the research based outcomes for evaluation in the field of education and psychology.

Skill Development and Sustainable Educational Growth

Emelyn Cereno Wagan, Laguna State Polytechnic University, Philippines

Skill Development and Sustainable Educational Growth explains the readers the relation between education, skills, sustainability and growth and makes them aware about the various skills that are needed for sustainable development and transformation of vocational education and training. The book also explains them the importance of learning for sustainable development and the role of skill development in a global context. Also discussed in the book are the international initiatives on the skills needed in the future for green economy, the plan of action on education for sustainable development and the various opportunities and challenges for training and development of skills. It also provides insights on the trends and issues in education for sustainable development.

Advanced Concepts for Solar Cells

P. Pérez Rodríguez, Delft University of Technology, Netherlands

This book provides a comprehensive introduction to the physics of the photovoltaic cell. The book is designed as an overview for those in the fields of optics and optical engineering, as well as those interested in energy policy, economics and photo-to-electric energy conversion. This book is intended for upper-level graduate students who have a reasonably good understanding of solid state physics and for scientists and engineers involved in research and development of solar cells.

Environmental Engineering for Civil Engineers

Tanjina Nur, University of Technology Sydney, Australia

This book on Environmental Engineering offers a thorough overview of different environmental stakeholders including water, air and materials present on earth. Considerable stress is given on the control of pollution caused by human activities. Apart from engineering principles, legal principles along with a comprehensive overview of risk analysis are also incorporated in the book. The text in the book mainly focusses on modern and classical engineering principles encompassing the production and control of water and air pollutants, hazardous and solid waste, etc. The quality of water and different water treatment technologies are also discussed in the book. Detailed analysis of air pollution, air quality and air quality control are embedded in this book. Effects of environmental pollution on human and animal health are also discussed in the book.

Materials and Mechanics for Electrochemical Energy Conversion

Lokesh Pandey, Uttarakhand Technical University, India

Materials and Mechanics for Electrochemical Energy Conversion discusses the fundamental mechanics of electrochemical energy conversion and different technologies related to it. It also includes the development and conversion technologies of electrochemical energy. It provides the reader with the concept of electrochemical energy conversion so as to understand the technologies involved in the conversion process, storage devices and nanomaterials involved and the application of photo-electrochemical cells and ionic liquid electrochemical energy storage and conversion. This book also discusses about storage systems of electrochemical energy and lithium ion batteries, electrochemical energy conversion in lead-acid batteries, nanostructured materials for electrochemical energy conversion and storage devices, electrochemical energy conversion in solid oxide fuel cells and photo-electrochemical cell and its applications in optoelectronics.

Aging and Diet

Shraddha Gautam

This book describes diet as a factor that promotes long-term health in people. The dietary components that prevent aging and diseases are mentioned. To better understand the connection between diet and aging, the author discusses relevant issues that affect food choices and practices around the world; such as the relation between obesity, overweight and diets. The book also discusses diet challenges for countries around the world, such as African communities where access to nutritious food may be hampered by poverty. The need to manage diseases tied to diets in present day society is touched on in the book, so as to ease unsustainable burden on the health-care system.

Sustainable Hospitality and Tourism Management

Margaret Ann MacLean, University of South Australia, Australia

Sustainable Hospitality and Tourism Management examines various aspects of environmental issues that are encountered by the two most emerging industry in the world, i.e. Hospitality and tourism industry. It includes basic concepts of sustainable hospitality and tourism management along with the meaning of sustainable travel and importance of food security. Provides the reader with the insights into the consumer behavior and the responsibility of the staff working under the hospitality and tourism business. This is to make readers understand various dimensions of achieving customer loyalty by adopting sustainable practices.

Mass Media and Public Opinion

Sandra M. Martinez, Polytechnic Univeristy of the Philippines, Philippines

The book 'Mass Media and Public Opinion' takes the readers through the role of mass media in forming the public opinion. It outlines the role played by the mass media in forming opinions on terrorism, politics, economics, social issues etc. Mass media reaches a large audience and hence holds a very important place in the way people perceive things. The book also talks about corruption in the field of mass media and how it is used to hide criminal activities and divert the public from important issues. The book aims to make the readers aware about the role and current position of mass media in the world.

Language and Linguistics

Social Linguistics and Literacies

Rowela S. Basa, University of the Assumption, Philippines.

This book describes literacy from a broader perspective other than reading and writing skills only. It mentions a large amount of multidisciplinary studies over the past decade, which put literacy in much larger social practices. The argument of this book is that within any given moment when using language, we must speak or write the right things in the appropriate way, while playing the correct social role, maintaining the correct values, attitudes and beliefs. What matters isn't language or grammar, but a mixture of speech, belief systems, written word and so on. The book also covers global literacy trends for kids, and emerging trends in social linguistics and literacies.

Library Management and Marketing

Aashish Kumar Srivastava, CSJM University Central Library, India

Library is a place where various sources of information are collected and kept and it is made accessible for a particular group of audience depending upon the type of library. People can access the information sources in the library either by referencing it in the library or by borrowing it. The book deals around the ways of management and marketing of library. It elaborates on the different techniques used by the library staffs in preserving and managing the library resources. Marketing of libraries is of utmost importance in today's world. Each and every detail about marketing a library is explained in an elaborate way. The management and marketing methods discussed in the book will benefit lots of library personnel.

General Biology

Ashok Kumar Bishoyi, Marwadi University, Gujrat, India

The meaning of biology is, “The science of life”, which is derived from the Greek word bios (life), and logos (knowledge). So, Biology is the field of science dealing with Living Being. That’s why Biology is also called Life Science. The book circumvents the customary human-centric style of nearly all introductory textbooks, the style which significantly misrepresents our understanding of the diversity of life. Our methodology focusses on the illustration of individual topics and their impact on different living species. For instance, the discussion of the cell-structure of different living things is present in the same chapter. The authors also highlight that it is essential to understand biological science as a whole for a thorough understanding of human biology. The book mainly avoids the use of specialized biological vocabulary where possible, instead it offers the concepts using simple English. This book is equally useful for readers from diverse backgrounds including researchers, professors, students, and biological scientists. Moreover, people having a background in other disciplines can also use this book to grasp the fundamentals of biology.

Introduction to Life Science

Smitha Nair, Mumbai University, India

Introduction of Life Science introduces the concept of Life Sciences including the history and evolution of life sciences. This book highlights different fields in the life sciences and the basic as well as applied sciences. The first half of the book refers to the theory of life science and the spectroscopy of life science. This book covers the concept of chromatography and its principles and the concept of microscope and its significance in life sciences. There are certain measures for safety in the life science laboratory that must be taken, have been mentioned in this book. The insights related to the future aspects of life sciences have been provided to the readers with the help of this book.

Fractal Analysis

Olga Moreira, University of Liege, Belgium

The book “Fractal Analysis” is a collection of contemporaneous articles aims to guide the reader through the world of fractals. A world of computer-generated self-similar patterns that can capture the intricacy of natural structure such as snowflakes, fern leaves, and tree branching. A world that is not only aesthetically pleasing but that is also at the basis of new technologies such as fractal antennas included in every mobile phone. The book is centred on simulation models as well as on the implementation of different methods of measuring the spatial and temporal characteristics of fractal patterns. For instance, box-counting based methods that can be used to determine the fractal dimension of the edges of the Saturn’s rings, forested landscapes, brain imaging data, and occurrence of words in text. It also includes an overview of fractal theory concepts, from self-similarity to the complexity of fractal networks.

General Physics

Nelson Bolívar, Central University of Venezuela, Venezuela

This book on the topic of General Physics offers a thorough understanding of basic physical laws and concepts. The illustration of the physical concepts in a reader-friendly way helps the readers implement this conceptual knowledge to a broad variety of everyday problems. This book covers the most important fundamental aspects of classical as well as quantum physics. A vast variety of topics are discussed in this book which include Newton laws of motion, mechanics, statistical mechanics, waves, thermodynamics, etc. Most of the physical laws of nature are demonstrated in the mathematical language. The readers are expected to have fundamental concepts of mathematics in order to completely understand the physical relations.

Psychology

Online Counselling and Guidance Skills

Sandy Jessie Lynn Balela-Leobrera, Laguna State Polytechnic University, Philippines

Online Counselling and Guidance Skills considers various aspects of online counselling and guidance skills explaining the roles and responsibilities associated with these counselling. It includes theories used during counselling and guidance and technologies related to it. Provide the reader with the insights into the practicalities of this mode of working, so as to understand that what are the model and practices required by the practitioners to adopt such technologies in their day to day life

Agriculture and Rural Development in a Globalizing World

Stephanya Lynn JonasLabee, University of Amsterdam, Netherlands

Integrated Rural Development (IRD) is a dual concept that focuses on improving the overall quality of the lives of people living in rural areas while also focusing on meeting their basic daily needs. In developing countries, agriculture supports the livelihoods of a great deal of its populace. It is the main driver of rural development and economic growth. This book pays particular attention to the features of the current wave of globalization. It examines the vital role agriculture plays in the development of a country. It explores the impact of the current wave of globalization that is driven majorly by technological advancements in Information, Communication and Telecommunication (ICT) technologies in agriculture and rural development. Specially, it focuses on the adoption of modern agricultural technologies in developing countries, the role of agriculture in rural development, the position of ICT in agricultural transformation, agricultural production in the face of climate change and the political economy of the agricultural sector.

Empowerment of Women: Evaluation of Western and Asian Countries

Margaret F. Bello, Ateneo de Zamboanga University, Philippines

In the current scenarios globally, a world free from gender gaps is a very distant dream but there are hopes of the times changing at faster pace with the growing technology. This book will cover an analysis of the past and of the years to find out the small things that have made the difference and how they can be converted to a bigger scale. Beginning from the true notions of the term 'Women empowerment', the welfare of women will be studied in detail followed by the needs and challenges of the same. A detailed look into the statistics of gender gaps at work will be examined and their impact on the lives of women will be assessed in various regions.
